Due to the digital techniques presented colours of all lines might not represent the original ones, thus they cannot be considered as reliable colour presentation. We recommend to check the authentic colour samples in distribution points.

The colours presented above refer to plasters and paints offered by Ceresit. These are acrylic, silicate-silicone, silicone, silicate, elastomeric, silico-elastomeric plasters and acrylic, silicone, silicate paints.

*In case of silicate paint CT 54 these colours are not available.

 Light reflectance value / HBW (LRV)

HBW (LRV) – light reflectance coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

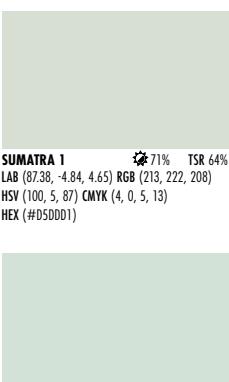

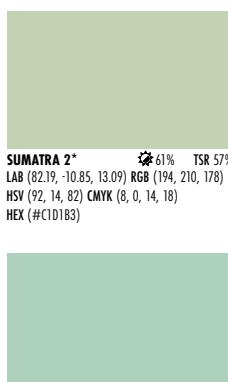

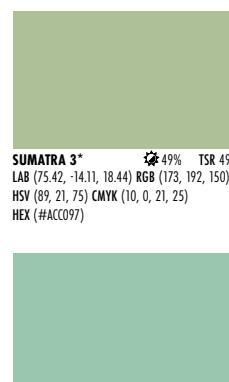

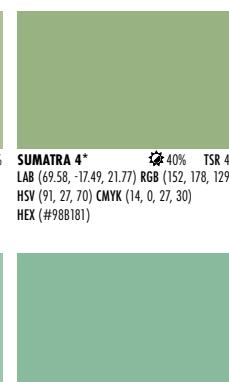

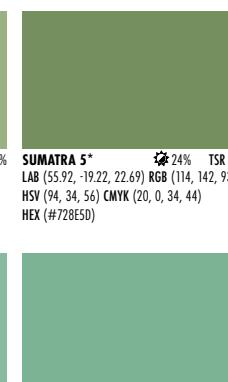

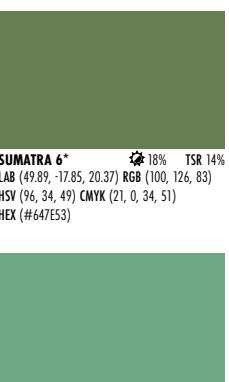

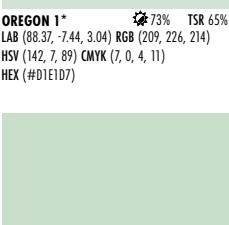

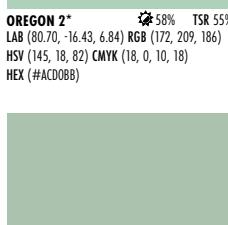

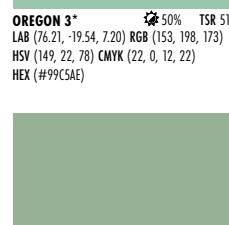

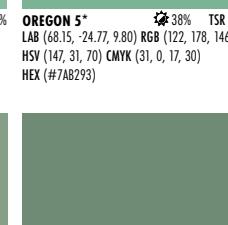

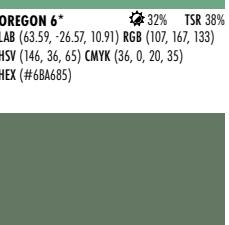

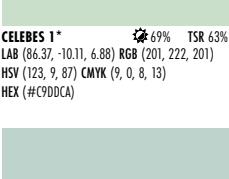

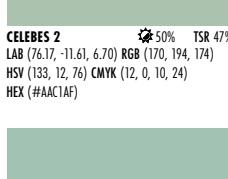

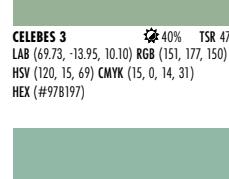

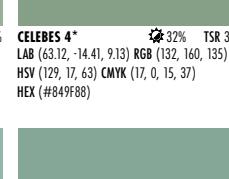

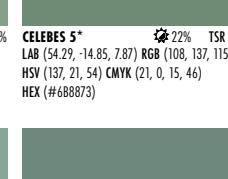

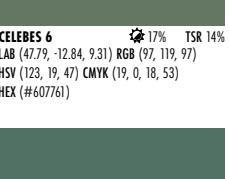

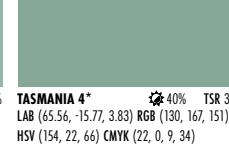

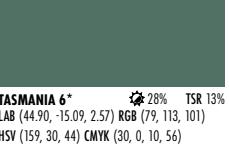

TSR – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the facade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW ≥ 20 and total solar reflection value TSR ≥ 20. If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.

If you like all greens, beiges and whites, you will find it here.

Due to the digital techniques presented colours of all lines might not represent the original ones, thus they cannot be considered as reliable colour presentation. We recommend to check the authentic colour samples in distribution points.

The colours presented above refer to plasters and paints offered by Ceresit. These are acrylic, silicate-silicone, silicone, silicate, elastomeric, silico-elastomeric plasters and acrylic, silicone, silicate paints.

*In case of silicate paint CT 54 these colours are not available.

Light reflectance value / HBW (LRV)

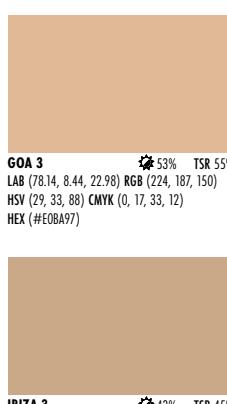

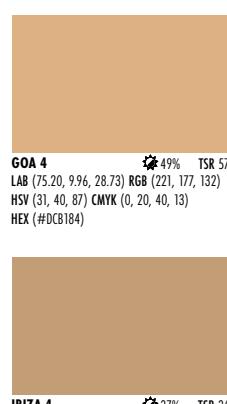

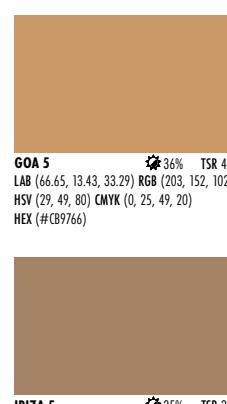

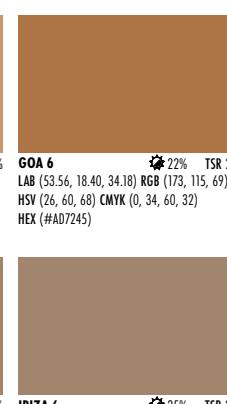

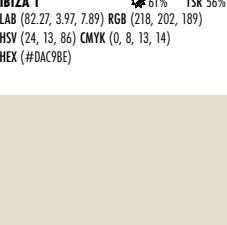

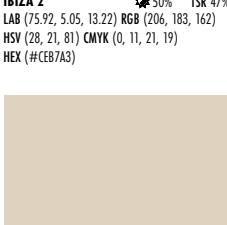

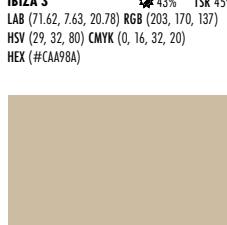

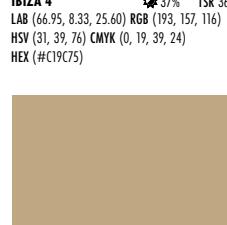

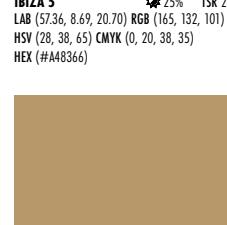

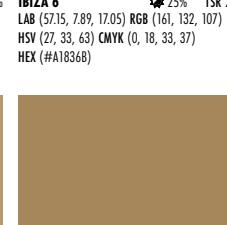

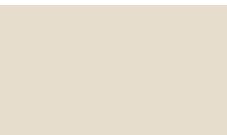

HBW (LRV) – light reflection coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

TSR – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the facade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW ≥ 20 and total solar reflection value TSR ≥ 20. If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.

Due to the digital techniques presented colours of all lines might not represent the original ones, thus they cannot be considered as reliable colour presentation. We recommend to check the authentic colour samples in distribution points.

The colours presented above refer to plasters and paints offered by Ceresit. These are acrylic, silicate-silicone, silicone, silicate, elastomeric, silico-elastomeric plasters and acrylic, silicone, silicate paints.

*In case of silicate paint CT 54 these colours are not available.

 Light reflectance value / HBW (LRV)

HBW (LRV) – light reflection coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

TSR – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the facade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW ≥ 20 and total solar reflection value TSR ≥ 20. If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.

Light reflectance value / HBW (LRV)

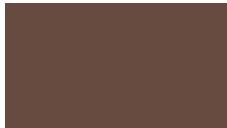

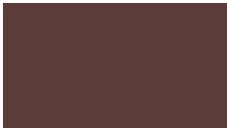

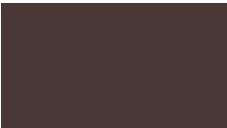

HBW (LRV) – light reflection coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

TSR – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the facade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW ≥ 20 and total solar reflection value TSR ≥ 20. If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.

Intense & Expressive

This palette contains 36 bold and intensive colours inspired by the natural beauty of jewels: from noble yellow, through emerald green, to diamond grey.

Due to the digital techniques presented colours of all lines might not represent the original ones, thus they cannot be consider as reliable colour presentation. We recommend to check the authentic colour samples in distribution points.

The colours presented from Intense & Expressive line are designed for CT 79 Elastomeric plaster and CT 76 silico-elastomeric Solar Protect plaster offered by Ceresit.

Light reflectance value / HBW (LRV)

HBW (LRV) – light reflection coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

TSR – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the façade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW ≥ 20 and total solar reflection value TSR ≥ 20. If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.
